

MR HARI HARAAN M

Career Objective

"To leverage my academic background in Electronics and Communication Engineering, coupled with hands-on experience in embedded systems and signal processing, to contribute to innovative projects in a dynamic environment. While rooted in the ECE domain, I have a strong interest in computing skills, particularly in backend and frontend web development. With a deep passion for programming languages and software development, I am committed to honing my technical expertise and contributing effectively to IT-driven objectives, aiming to excel in building robust and innovative software solutions."

EDUCATION QUALIFICATION

SRK MATRIC HR SECONDARY SCHOOL

- 2018-19-Completed SSLC 10th With 94.6%
- 2020-2021-Completed AISSCE 12th With 92.67%

SRI KRISHNA COLLEGE OF TECHNOLOGY

- 2021 - 2025 Bachelor of Engineering in Electronics And Communication Engineering(B.E-ECE)
- CGPA-6.66
- Year Of Graduation : 2025

CERTIFICATIONS

- "Certified in a Value-Added Course on Embedded IoT conducted by Tessolve Company, Bangalore."

SKILLS

- Proficient in core Electrical and Telecommunications concepts, including Embedded Systems, Signals and Systems, Microprocessors and VLSI, and Wireless Communication. Gained practical knowledge through academic coursework and hands-on projects, enhancing my understanding of circuit design, signal processing, and communication technologies."
- Equipped with a solid foundation of programming languages such as Java, JavaScript, C++, Python, HTML, and CSS and Frameworks Such as Reactjs,Angular js. And Well Balanced In Tools Such as Postman and Spring Boot and Databases OF MYSQL
- I have actively pursued courses in C,C++,JAVA-Basics,JAVA_Oops, JAVA-Data Structures, JAVA-Dbms,React.js, Spring Boot,AWS,MYSQL and web development using Java Script.
- Alongside my learning journey, I have successfully completed multiple projects that demonstrate my practical skills in both frontend and backend development.
- As a fresher with a strong interest in software development, I am eager to apply my knowledge to real-world challenges, contribute to innovative solutions, and grow in a dynamic IT environment.
- Leadership ,Well Speaking Communication ,Pressure Handelling Problem Solving And Time Adaptability For A Task.Passionate about continuous learning and development, I am dedicated to mastering new skills .

CONTACT

- Name : HariHaraan M
- Phone : 6382454297
- Gmail : hariharaanmurugesh55@gmail.com
- Linkdn Profile: HariHaraanMurugesh
- GitHubLink:<https://github.com/hariharaan8012>
- Native : Salem,Tamilnadu

STRENGTH

- Tackle Problems
- Ability To Speak Boldly
- Experienced to Cooperate
- Taking Every Situation's Into Positive Manner

INTREST AND HOBBIES

- Playing Cricket
- Learning New Skills and Implementing New Projects
- Travelling Lot
- Hearing Musics
- Watching Cinema
- Workingout On Gym
- Reading Novels And Story's

REWARDS AND RECOGNITION

- “Received a participation certificate for the Yugam event conducted by Kumaraguru College of Engineering.”
- “Received a participation certificate for the robotics event conducted by SKCET.”
- .“Received a participation certificate for an event at PSG College of Technology.”

PROJECTS COMPLETED.

• **Worked On Project Of React Creating Weather App And Vote Polling.**

- Weather App: Developed a responsive weather application using React that allows users to search for real-time weather information based on city names. The app integrates with an external weather API to fetch and display current weather conditions, including temperature, humidity, and weather descriptions. Key features include:
 - Search Functionality: Users can search for weather updates by entering city names.
 - API Integration: Utilizes a third-party weather API to retrieve up-to-date weather data.
 - Responsive Design: Ensures optimal viewing experience across various devices.
 - User Interface: Clean and intuitive UI designed with React components and styled using CSS.
- Vote Polling System: Created a dynamic vote polling system using React to allow users to participate in polls and view results in real-time. This system provides an interactive platform for conducting surveys or opinion polls. Key features include:
 - Poll Creation: Admins can create polls with multiple options for users to vote on.
 - Real-time Voting: Users can cast their votes, and the results are updated in real-time.
 - Data Visualization: Poll results are displayed using charts or graphs for easy interpretation.
 - State Management: Utilizes React’s state management to handle user inputs and poll data

• **WORKED SPRING BOOT POSTMAN PROJECT.**

- In the Spring Boot Postman project I worked on, the focus was on building a robust backend application using Spring Boot’s powerful capabilities. Spring Boot was chosen for its ability to quickly set up a production-ready application with minimal configuration, leveraging Spring’s extensive ecosystem for dependency injection, data access, and web services. We developed RESTful APIs to handle various operations like user management, data retrieval, and updates, utilizing Spring MVC for defining controllers, Spring Data JPA for database interactions, and Hibernate as the ORM tool.
- Postman played a crucial role in our project by enabling comprehensive testing and validation of these APIs. We used Postman to send HTTP requests, simulate different client scenarios, and verify the accuracy and reliability of our API responses. This included testing different HTTP methods (GET, POST, PUT, DELETE), handling request parameters and payloads (JSON or form data), and ensuring proper error handling and status code responses. Postman’s collection feature allowed us to organize and automate our API tests, ensuring consistent behavior across development, testing, and deployment phases.
- Overall, the Spring Boot Postman project was instrumental in demonstrating the seamless integration of backend development with efficient API testing, highlighting the benefits of rapid development, scalability, and maintainability that Spring Boot offers in modern web application development.

- **WORKED ON JAVA SCRIPT BOOKSKEY PROJECT**

- Bookskey is a JavaScript-based web application designed to manage and organize book collections efficiently. This project showcases my skills in JavaScript, HTML, and CSS by implementing dynamic features such as adding, editing, and deleting book entries. Through this project, I gained practical experience in DOM manipulation, event handling, and user interface design. Bookskey reflects my ability to develop interactive web applications and demonstrates my dedication to enhancing my web development skills.“

- **COLLEGE FINAL YEAR PROJECT**

- **AUTOMATED FRUIT CLASSIFICATION AND MEASUREMENT OF NUTRIENT CALORIE VALUES**

- **Project Overview:** Developed an application using React.js for the frontend and Python (with CNN) for the backend to classify apples and predict their nutritional value.
- **Objective:** The application focuses on scanning apples to assess their quality, nutritional content, and provide a prediction accuracy level, indicating whether the apple is safe to eat.
- **Process:** The app uses the device camera or uploaded images to capture the apple's visual features.
- The captured image is processed using a Convolutional Neural Network (CNN) model trained to identify apple defects, ripeness, and quality.
- The system then calculates the apple's calorie values and predicts its edibility status with an accuracy score.
- **Technologies Used:** React.js for the user interface, Python (with CNN) for image processing and prediction, ensuring seamless integration between the frontend and backend.
- **Outcome:** This project demonstrated practical skills in machine learning, web development, and data analysis, while effectively combining AI techniques to deliver a functional and user-friendly solution.

CO-CURRICULAR ACTIVITIES

- Member Of Rotract Club Of SKCt(2022-2023)
- Worked As a Co-ordinator Of Talk Show Club ..Of SKCT.(2022)
- Attended a workshop on marketing at Coimbatore Institute of Technology.
- Attended Seminars In PSG COLLEGE OF TECHNOLOGY

Key Responsibilities:

- Developed and implemented web applications using React.js, JavaScript, HTML, and CSS to create interactive user interfaces.
- Designed and managed backend logic using Python and integrated it with front-end frameworks for seamless data flow.
- Applied Data Structures and Algorithms concepts to optimize code performance and improve application efficiency.
- Utilized Version Control Systems (e.g., Git, GitHub) to collaborate with team members and manage project updates.
- Developed and tested embedded systems projects involving Microprocessors, VLSI, and Signal Processing.
- Conducted hardware-software integration for IoT-based systems, ensuring smooth communication between devices.
- Participated in hackathons, coding challenges, and project-based learning to enhance problem-solving skills.

INTERNSHIP PROGRAM :

- **Attended Two Internship Programs**

- I had the privilege of attending a **One-month Internship on Cloud Computing at MIST Software Solutions, Coimbatore, from 1st May 2024 to 30th May 2024**, where I gained extensive exposure to this transformative domain. Cloud computing is a cutting-edge technology that enables on-demand access to a shared pool of configurable computing resources such as servers, storage, databases, networking, and software over the internet. During the internship, I had hands-on experience working with cloud platforms, understanding concepts like Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). I explored key technologies such as virtualization, containerization, and deployment strategies in cloud environments. This internship provided me with a solid foundation in cloud architecture, resource management, and security protocols. I gained practical knowledge of implementing scalable and cost-effective solutions, as well as troubleshooting in cloud-based ecosystems. Working on real-time projects and collaborating with industry professionals enhanced my understanding of cloud integration and deployment processes. The exposure I received has deepened my interest and confidence in this domain, equipping me with the skills to adapt to the rapidly evolving landscape of cloud computing.
- I had the opportunity to attend a **15-day internship on AI Hardware and Neuromorphic Chips at KITKAT Software Technologies, Coimbatore from 15th april to 30th april ,2024**, where I gained valuable insights into this revolutionary domain. AI hardware focuses on designing specialized computing architectures that accelerate artificial intelligence tasks, enabling faster and more efficient performance than traditional systems. Neuromorphic chips, inspired by the structure and functioning of the human brain, are at the forefront of this technology, offering energy-efficient solutions for tasks like pattern recognition, edge computing, and real-time decision-making. During the internship, I worked on understanding the principles of neuromorphic computing, exploring how spiking neural networks (SNNs) mimic biological processes to achieve unparalleled efficiency. I was introduced to the design and functionality of hardware accelerators tailored for AI workloads, such as GPUs, TPUs, and custom neuromorphic processors. I also had the chance to analyze how these chips are integrated into real-world applications, from autonomous systems to IoT devices. This internship provided me with a clear perspective on the future of AI hardware and its critical role in overcoming the limitations of traditional computing architectures. By engaging in technical sessions and project-based learning, I developed a practical understanding of how neuromorphic chips are designed, optimized, and deployed. The hands-on experience and exposure to industry trends have broadened my knowledge and enhanced my passion for this domain, positioning me well for future opportunities in AI hardware innovation.

Key Achievements:

- Successfully completed a Final Year Project on Automated Fruit Classification and Calorie Measurement using React.js and CNN with Python, achieving high prediction accuracy.
- Built a JavaScript-based project called Bookskey, showcasing advanced DOM manipulation and UI design skills.
- Received recognition for exceptional performance in a Cloud Computing Internship at MIST Software Solutions, gaining hands-on experience in cloud infrastructure.
- Completed certified courses in Java, React.js, and Python, strengthening core programming knowledge.
- Demonstrated strong leadership by effectively managing team projects, ensuring timely completion and quality output.

"I hereby declare that the above-mentioned information is true to the best of my knowledge and belief."

- Mr.Hari Haraan M
