PROJECTS

PNEUMONET: LEVERAGING DEEP LEARNING FOR AUTOMATED PNEUMONIA DETECTION IN CHEST X-RAYS <i>Developed a deep learning model for detecting pneumonia from chest X-ray images using the VGG-16 convolutional neural network architecture. Preprocessed image data for training, validation, and testing. Fine-tuned the VGG-16 model to achieve high accuracy in classifying images as pneumonia-positive or negative. Evaluated model performance using metrics such as accuracy, precision, recall, and F1 score, demonstrating effective detection capability.</i>
