PROJECT

Personal ai career

CareerGenie is an AI-powered career guidance platform designed to help users find the right job opportunities, improve their skills, and plan their career growth. It is available as a mobile app, web app, and chatbot, ensuring accessibility across different devices. The frontend is built using Flutter for mobile and React.js for web, providing a smooth and interactive user experience. The backend is powered by FastAPI with Python, handling user data, career recommendations, and AI-driven insights. It uses PostgreSQL and MongoDB for structured and unstructured data storage. Machine learning models analyze user skills and preferences to suggest the best career paths, while APIs from LinkedIn, Indeed, Coursera, and Udemy provide real-time job listings and learning resources. Hosted on AWS or Google Cloud, CareerGenie ensures security with OAuth2 authentication and uses messaging services like Twilio for notifications. With AI-driven career insights and real-time job updates, CareerGenie makes career planning smarter and easier.

SKILLS

- Communication
- Networking basics
- Operating Systems
- Machine learning
- Encryption
- Unit testing
- Integration testing
- System testing
- Critical Thinking
- Time management
